**2.4 Core Assembly**

Two insulated conductors shall be twisted into a pair. Twisted pairs shall be assembled to form with first and second layer around centered filler. Pair No. 1~10 shall be applied to sequentially lay on the centered filler (first layer) and Pair No. 11~25 shall be applied to sequentially lay on the first layer (second layer)  
 The twisted and stranding pitch shall be applied under the ranges that meet the electrical requirements.  
 If required for manufacturing reasons, a plastic tape may be applied over the cable core.

**2.5 Rip Cord**

A rip cord (non-metallic) shall be applied under the sheath

**2.5 Sheath**

The flame retardant PVC or LSZH (Low Smoke Zero Halogen) compound colored grey or other colors shall be applied over the cable core. The sheath shall be uniform and shall not have any defects.  
 The thickness of sheath and cable diameter shall be shown as Table 4.
