OUTDOOR UNI-TUBE LIGHT-ARMoured FIBRE CABLE

These cables are used for outside plant and consist of up to 12 single-mode (SM 9/125) fibre or multimode (MM 62.5/125 or MM 50/125) fibres.

This type of cable is the centre loose tube construction. The Loose Tube components are manufactured from high strength, low shrinkage PBT compound, and the tube will contain optical fibres. The loose tube also contains a thixotropic jelly, to prevent water penetration and protect the fibres against shock. A corrugated steel tape (0.15mm thick and with a 0.05mm copolymer coating on both sides) is then applied longitudinally over the loose tube. Between the steel tape and the loose tube, water-blocking material is applied to keep the cable compact and watertight. Two parallel steel wires are placed at the two sides of the steel tape. Finally the cable is completed with a black polyethylene (PE) sheath.

INDOOR TIGHT BUFFERED FIBRE CABLE

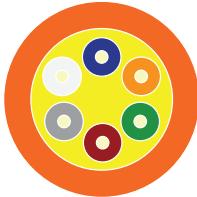

These cables are used for indoor applications and consist of 4, 6, 8, 12 single-mode (SM 9/125) fibre or multimode (MM62.5/125 or MM50/125) fibres. Each fibre is coated to a 900 micron diameter, with a durable, protective material and the coating (buffer material). Each fibre is uniquely colour coded as defined in Table 1. Surrounding the group of buffered fibres are aramid yarns to provide the sufficient tensile strength to the cable, which effectively avoids damaging the cable during the installation, transports, operation etc. An outer sheath is then applied over the tight fibre / aramid assembly. The outer sheath has a flame retardant function, PVC (Riser OFNR).

CATEGORY 3 MULTIPAIR CABLES

Imatek Category 3 multipair cable consists of solid copper conductors with 24AWG. It is generally used in voice application systems where the bandwidth is up to 16MHz. Imatek Category 3 multipair cable exceeds the requirements of TIA/EIA 568-B.2 and ISO/IEC 11801.

TECHNICAL DETAILS

Pairs	25, 50, 100

CATEGORY 5E UTP PVC CABLES

Imatek Category 5E 4-Pair Cable consists of 24AWG solid-copper conductors insulated with high-density polyethylene. The insulated conductors are tightly twisted into pairs and covered with PVC material.

Imatek Category 5E 4-Pair Cable provides excellent high-speed transmission, is certified to 155MHz and supports application such as 155Mb/s ATM, 622Mb/s ATM and IEEE 802.3 1000 Base-T (Gigabit Ethernet) standard, using parallel transmission technology. This product is UL listed with a CMR fire rating.
